

Big Data Engineer Profile - May 2024 Graduation

Data Engineer and Application Developer with 4 years of experience in designing and implementing robust data solutions. Skilled in ETL processes, data architecture, and data integration, with a focus on data warehousing and pipelines. Proven ability to resolve complex data challenges and deliver business-critical insights. Committed to leveraging cutting-edge technologies to drive innovation and optimize data-driven decision-making.

Technical Proficiencies

Cloud :	Amazon AWS, Azure
Languages :	Python, R, Apache Spark, HTML, CSS, and JavaScript.
AI/ML :	Scikit-learn, Spacy, NLTK, TensorFlow, Keras, PyTorch
Tools :	Pandas, NumPy, SciPy, Matplotlib, Microsoft Excel, Multimedia tools (Photoshop, Premiere Pro, Procreate), GIS Leaflet JS, ArcGIS Online web mapping, API Gateway, building RESTful API's to enable data consumption, BeautifulSoup for Web Scraping
DBMS:	MySQL, Oracle PL/SQL, T-SQL SQL Server, MongoDB, Cypher query language for Neo4j graph DB, SparQL
Data Warehousing :	Apache Spark, Amazon Redshift, Databricks
Data Integration ETL :	AWS Lambda, AWS Glue, AWS Athena, Azure Data Factory, Azure Databricks, Azure Synapse Analytics
BI Tools :	Tableau, Power Query M functions, DAX functions for Microsoft Power BI, Microsoft Excel
Planning Tools :	Jira Work Management, Confluence, Miro, Lucid Chart
MLOps CI/CD :	Git, Github, Github Actions, Jenkins, Docker container, Airflow for job scheduling orchestration, Azure Data Factory
Microservices :	Kafka, Postman, REST API, Kubernetes
Cloud:	AWS, Azure
App Framework:	Flask, Shiny, Expo with React Native and JavaScript for Mobile app

Core Competencies

- Machine Learning
- Data Mining
- Data Modelling and Statistical Analysis
- Data Integration ETL
- Business Intelligence
- Staging Big Data
- Hypothesis Testing A/B tests
- SQL
- Predictive modeling

Professional Experience

WorkOrderWizard, Suwanee, GA, US

Principal Data Engineer

05/2024 – Present

Developed and maintained data ELT pipelines with Azure and created analytics dashboards using react native front-end. Demonstrated proficiency in SQL, Python, and gained hands-on experience with Spark and Airflow. I effectively managed workflows using Git and Jira, and consistently brought a proactive, solution-oriented approach to solve complex challenges, particularly in driving customer management solutions.

University of Arizona, Tucson, Arizona, US

Graduate Research Assistant Data Engineer

01/2023 – 05/2024

Assisted in conducting research related to urban planning, data science, and geospatial analysis. Collaborated on open-source research projects, implemented advanced features like vector export, and developed a geo mapping GIS application using R programming, Shiny web app package, and Leaflet JS library in collaboration with Dr. Cristian Roman Palacios, Assistant Professor of Practice from Department: School of Information. Link: <https://viz.datascience.arizona.edu/barrionmap/>

Collaborated on Systems Engineering project funded by DoD involving Graph Database, Web Ontology Language (OWL) and RDF integration with spacecraft data, leveraging SPARQL for querying, and successfully created a comprehensive dashboard to visualize the combined datasets.

Nvidia Corporation, Santa Clara, CA

Data Scientist

08/2022 – 01/2023

Organize structured data – Perform Transformations like Aggregation/ normalization on Sales and Inventory records from Oracle ERP OLTP systems and Load data into warehouse; Performed Power Query M function for Get-data transformations; add modeling using DAX and created Sales visualization Reports with Power BI.

Created calculated bridge-table to handle models with relationship cardinality many-to-many. Use Power BI Performance analyzer to tune the new measures in relationship models.

- Design data model that uses star schema instead of snowflake by creating a central fact table linking other tables, containing only the attributes needed.
- Accomplished implementing End-to-End Ops Data platforms and deploying scalable algorithms for supply planning through statistical analytics, ML, and anomaly detection. Proficient in leading discussions, identifying trends, and presenting actionable insights to drive business solutions.

Vodafone Intelligent Solutions, Pune, India

Big Data Engineer Senior Executive

01/2020 – 12/2021

Delivered successful implementations by working across a scrum team of 15 using agile approaches.

- Transformed semi-structured JSON data to structured data using Databricks platform and Spark for distributed data processing. Stored data in AWS S3 and Databricks DBFS, improving data accessibility and processing efficiency
- Performed ETL with PySpark + SQL to organize ingested batch file (JSON) and stream data to bronze, silver and gold table and maintain multi-hop Delta Live Table DLT pipeline or maintain a medallion architecture. Used Spark structured streaming processing engine to query infinite data source for incremental data processing.
- Process Change Data Capture CDC logs made to data using DLT. CDC involves processing of identifying and capturing changes made to data to the data source and then delivering those changes to the target.

Education

Masters Management Information Systems MIS

University of Arizona, Eller College of Management, Tucson, Arizona, US

08/2022 – 05/2024

Courses: Data Visualization, Data Mining, Machine Learning, AI, NLP, MIS Big Data, Data Warehousing

Bachelors Computer and Information Science

SRM University, Chennai, Tamil Nadu, India

05/2016 – 05/2020

Courses: Data Structures and Algorithms, Object Oriented Programming, Python, Database Management SQL, Computer Architecture, Theory of Computation, Computer Networking

Certificate & Certification

AWS Certified Cloud Practitioner (CLF-C01) [Credly](#)
Databricks Accredited Lakehouse Fundamentals [Credential](#)

Awards

Recipient of University of Arizona CAPLA Research Seed Grant

Conference Publications

Design and Implementation of an Image Classifier using CNN, Conference name: IEEE, 2019
Critical Analysis on Cryptocurrency, International Journal of Computer Sciences and Engineering, 2018

Projects

Snake Game AI, 2023 [Github](#)
Wine Quality Prediction, 2022 [Github](#)

AWS Glue Pipeline, 2023 [Link](#)
Azure ETL Pipeline, 2024 [Github](#)
